

PRAKTIKUM SISTEM BASIS DATA

Nama	Alexander Christhian	No. Modul	5
NPM	2306267025	Tipe	TUTAM

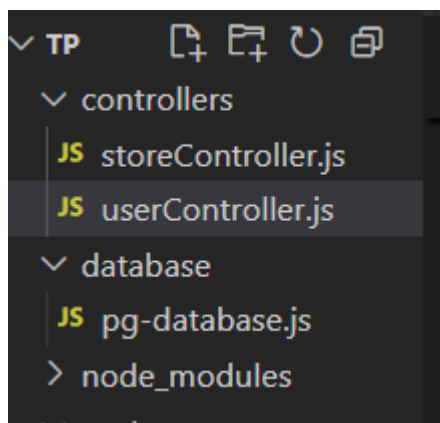

1. Jalankan Query :

The screenshot shows a SQL Editor interface with the following components:

- SQL Editor**: The main area for writing SQL queries. It contains a query to create an 'items' table with columns: id (UUID PRIMARY KEY), name (VARCHAR(255)), price (INT), store_id (UUID), image_url (VARCHAR(255)), stock (INT), and created_at (TIMESTAMP). It also includes a foreign key constraint for store_id.
- History**: A list of previous queries and their execution times. It shows three queries: 'create items table with store reference' (Mar 16, 2025 - 12:38pm), 'create users table with UUID and default balance' (Mar 12, 2025 - 10:11am), and 'create stores table with uuid and timestamp' (Mar 11, 2025 - 9:12pm).
- Run**: A button to execute the query.
- Connected (1 query)**: A status indicator showing the connection is active.
- Statement executed successfully**: A message indicating the query was executed without errors.

2. Node Modules masih ada :

4. Cloudinary :

```
.env  X  JS server.js  JS storeRoutes.js
C:\Users\alexa\Documents\Semester 4\SBD\Praktikum\Modul 5\T
1  PORT=3000
2  PG_CONNECTION_STRING=postgresql://express
3  CLOUDINARY_URL=cloudinary://7999867593813
```

API Keys Cloud name: dgkstqbe6

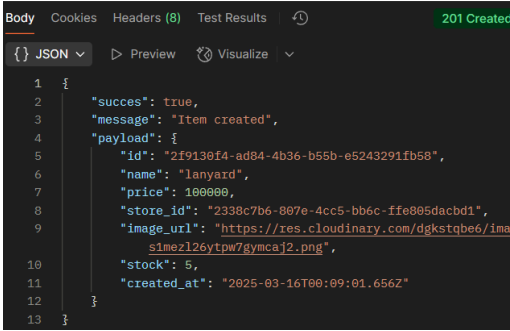

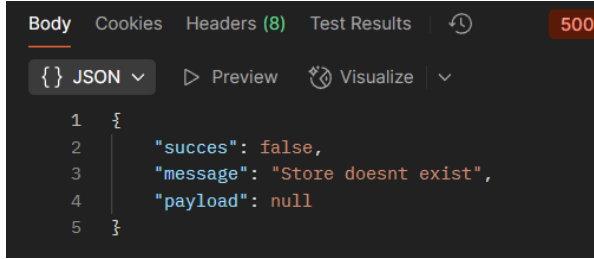

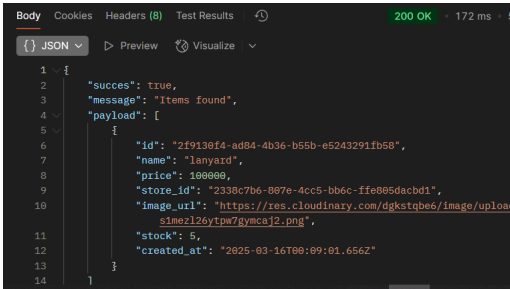

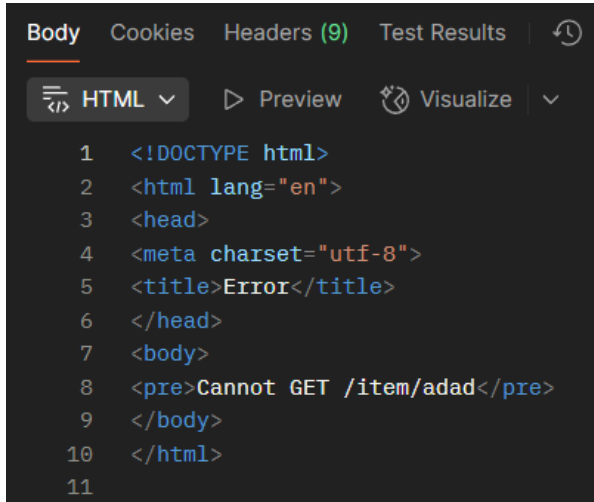

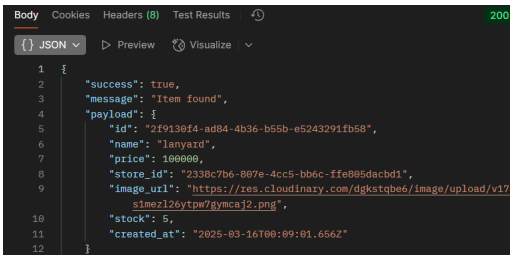

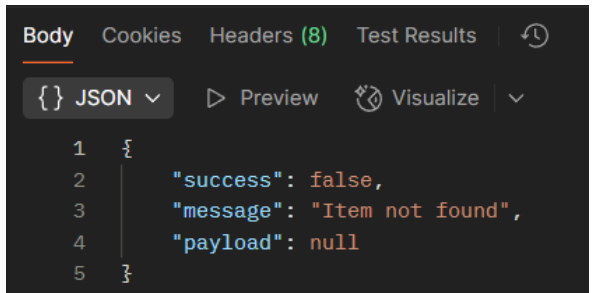

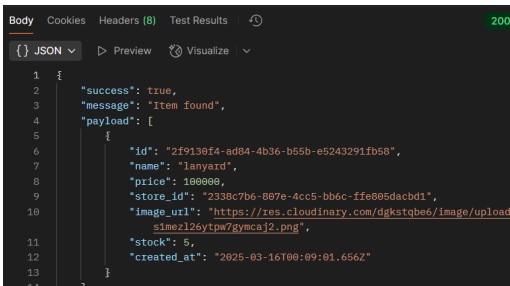

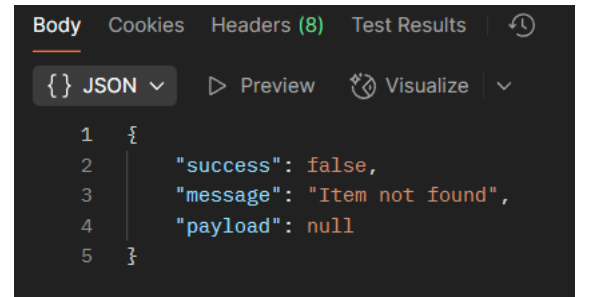

Manage API key and secret pairs for your product environment. To build the environment, use the provided format and substitute your actual values for the placeholders. Make sure to st

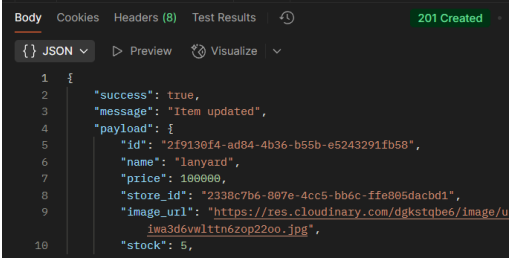

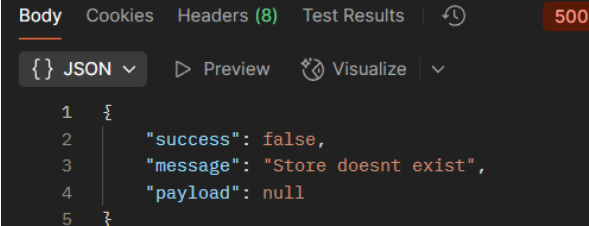

API environment variable

```
